***DETAILED OFFICE ACTION***

***Examiner's Amendment***

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Please change the following:

**In the claim:**

In claim 1, line 6, change "winded" to -wound-

In claim 1, line 19, change "winded" to -wound-

The above Examiner's amendment is simply correct grammatical issue in the recitation. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

***Allowable Subject Matter***

Claims 1-6 are allowed.

***Reason for Allowability***

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the particular recited structure of an automatic electric power generating device for wheels, comprising:

a wheel hub having a hollow column extended from a center thereof, a ***first magnetic pole set*** and a ***second magnetic element***; wherein, the first magnetic pole set having left and right

Art Unit: 2834

magnetic poles that form intermeshed-claw-pole set and has a spool with a coil having one guiding end thereof connected to a first electric power driven device, and ;

a housing having an opening at a center portion thereof, a *first magnetic element* and a **second magnetic pole set**; wherein, the second magnetic pole set having left and right magnetic poles that form an intermeshed-claw-pole set and has a spool with a coil having one guiding end thereof connected to a second electric power driven;

the spool and the left and right magnetic poles of the first magnetic pole set, and the second magnetic element, are placed in the housing without coming into contact with one another;

the spool and the left and right magnetic poles of the second magnetic pole set, and the first magnetic element, are placed in the wheel hub without coming into contact with one another', the magnetic plates of the left and right magnetic poles of the first magnetic pole set are corresponded with the first magnetic element; and the magnetic plates of the left and right magnetic poles of the second magnetic pole set are corresponded with the second magnetic element; and

through *rotations of the second magnetic element at wheel*, the **first magnetic pole set** and the wheel hub are rotated, i.e., rotor rotating; electric power is generated by induction between the immobile, **second magnetic pole set** and the *first magnetic element* i.e., stator assembly, at the housing, and the rotating first magnetic pole set and the second magnetic element;

at the wheel hub, thereby driving the first electric power driven device and providing the second electric power driven device with electric power and accomplishing automatically generating electric power without requiring any electric cells.

Comparing to the prior-art of the record, none of the prior art references of the record, either stand -alone or in combination, has taught or suggest the above-mentioned features, i.e., an intermeshed claw-pole stator with its magnetic element interact with an intermeshed claw-pole rotor with its magnetic element, wherein the rotation of the wheel hub is a mechanical input source to rotate the rotor in order for the generator with claw-pole stator claw-pole rotor to generate electricity.

The prior-art refs show either the stator (or the rotor) is being configured as a claw pole magnetic assembly, i.e., the claw pole magnetic set and its magnetic elements, interact with the rotor (or the stator) of other configuration that is not claw-pole magnetic assembly, i.e. claw pole set and its magnetic elements.

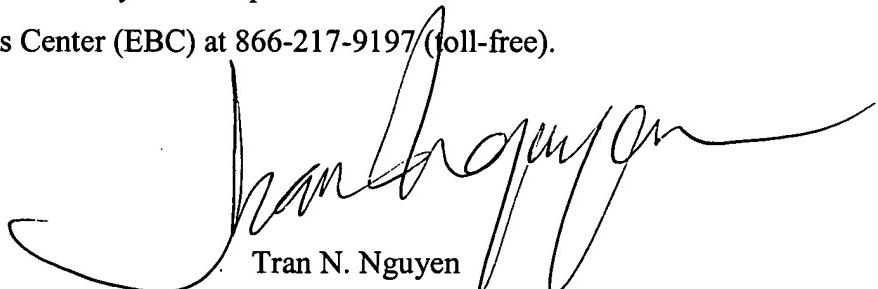

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
